                                                                    The present sequence represents a nucleoside 2-deoxyribosyltransferase enzyme. This enzyme is involved in the biosynthesis of deoxyribonucleosides, and is used in the method of the invention. The specification describes a method for the in vitro enzymatic synthesis of deoxyribonucleosides. The method comprises reacting deoxyribose 1-phosphate and a nucleobase to form a deoxyribonucleoside and an inorganic phosphate. Bnzymes which may be used in the method of the invention include thymidine phosphorylase, purine nucleoside phosphorylase, purine nucleoside phosphorylase, plosphopentose aldolase, fructose 1,6-diphosphate aldolase, deoxyribokinase, and nucleoside 2-deoxyribosyltransferase

The invention relates to a method for evolution of a protein (X) so as to modify its characteristics. Further disclosed are mutated proteins (X*) produced by the new method and with altered activity, relative to (X). Also disclosed is a nucleic acid (I) comprising a sequence for N-dideoxyribosyltransferase (DDTP), obtained from an N-geoxyribosyltransferase (DDTP), obtained from an N-geoxyribosyltransferase (DDTP), i.e. an enzyme able to transfer and dideoxyribosyltransferase (DDTP), i.e. an enzyme able to transfer dideoxyribosyltransferase (DDTP), i.e. an enzyme able to transfer addeoxyribosyltransferase (DDTP), i.e. an enzyme able to transfer and dideoxyribosyltransferase (DDTP), i.e. an enzyme able to transfer and dideoxyribosyltransferase and nucleosides that have antivity or can be used to treat infections, particularly ddc and ddI. The current sequence represents the N-deoxyribosyltransferase (DTP) amino acid sequence containing a G9S mutation. This protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         190 GACAAGGTTTGGGCTACGGCCACCTACAACGACTTGAACGGGATCAAGACCAACGAC 249

                                                                              100
                                                                                                             369
                                                                                                                            The present sequence represents a N-deoxyribosyltransferase protein from Lactobacillus. The enzyme is encoded by the ntd gene. The N-deoxyribosyltransferase protein is useful to raise specific antibodies, and for in vitro or in vivo enzymatic synthesis of deoxyribonucleotides, particularly those containing non-natural bases. These deoxyribonucleotides are useful for treating bacterial, viral (e.g. HIV), parasitic or fungal infections, for antitumour chemotherapy, and as insecticides or herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New N-deoxyribosyltransferase from Lactobacillus, useful for preparing deoxyribonucleotides, e.g. for use as antiviral agents, also related nucleic acid and antibodies.

The present sequence represents a N-deoxyribosyltransferase protein from Lactobacillus. The enzyme is encoded by the ntd gene. The N-deoxyribosyltransferase protein is useful to raise specific antibodies, and for in vitro or in vivo enzymatic synthesis of deoxyribonucleotides, particularly those containing non-natural bases. These deoxyribonucleotides are useful for treating bacterial, viral (e.g. HIV), parasitic or fungal infections, for antitumour chemotherapy, and as insecticides or herbicides

decoxyribosyltransferase-II. The nucleoside decoxyribosyltransferase-II and the encoding gene are useful in an enzymatic preparation of a decoxynucleoside. The decoxynucleoside is useful as the raw material for various drugs. The present sequence represents the L. helveticus recombinant nucleoside decoxyribosyltransferase-II (ndtB)

The present sequence represents a N-deoxyribosyltransferase protein from Lactobacillus. The enzyme is encoded by the ntd gene. The N-deoxyribosyltransferase protein is useful to raise specific antibodies, and for in vitro or in vivo enzymatic synthesis of deoxyribonucleotides, particularly those containing non-natural bases. These deoxyribonucleotides are useful for treating bacterial, viral (e.g. HIV), parasitic or fungal infections, for antitumour chemotherapy, and as insecticides or herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GTCTACATCCCTGACGAAGAAGACGTCGGCCTGGGCATGGAACTGGGTTACGCCTTGAGC 321
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New N-deoxyribosyltransferase from Lactobacillus, useful for preparing deoxyribonucleotides, e.g. for use as antiviral agents, also related nucleic acid and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21 AlaSerAlaThrTyrHisAsnAspLeuValGlyIleLysSerSerAspIleMetLeuGly

                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence rewpresents a N-deoxyribosyltransferase protein from Lactobacillus. The enzyme is encoded by the ntd gene. The N-deoxyribosyltransferase protein is useful to raise specific antibodies, and for in vitro or in vivo enzymatic synthesis of deoxyribonucleotides, particularly those containing non-natural bases. These deoxyribonucleotides are useful for treating bacterial, viral (e.g. HIV), parasitic or fungal infections, for antitumour chemotherapy, and as insecticides or herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    381

The present sequence represents a N-deoxyribosyltransferase protein from Lactobacillus. The enzyme is encoded by the ptd gene. The N-deoxyribosyltransferase protein is useful to raise specific antibodies, and for in vitro or in vivo enzymatic synthesis of deoxyribonucleotides, particularly those containing non-natural bases. These deoxyribonucleotides are useful for treating bacterial, viral (e.g. HIV), parasitic or fungal infections, for antitumour chemotherapy, and as insecticides or herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  130 AsnieuMetLeuAlaArgGlyValThrTrp---LeuGluProAsn-----AspPhe 146

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a N-deoxyribosyltransferase protein from Lactobacillus. The enzyme is encoded by the ntd gene. The N-deoxyribosyltransferase protein is useful to raise specific antibodies, and for in vitro or in vivo enzymatic synthesis of deoxyribonucleotides, particularly those containing non-natural bases. These deoxyribonucleotides are useful for treating bacterial, viral (e.g. HIV), parasitic or fungal infections, for antitumour chemotherapy, and as insecticides or herbicides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method of detecting Cryptosporidium ibiological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it with Cryptosporidium GP900, P68 or cryptospain antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for detecting and identifying individual Cryptosporidium isolates based on the genetic characteristics, and for diagnosis of prior or concurrent Cryptosporidium infection. The present sequence is a C. parvum protein sequence used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting Cryptosporidium in biological and environmental samples and diagnosis of cryptosporidiosis involves, contacting the sample with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TCTACTTCGGTGCCGGCTGGTTCACTGACCGCCAAAACAAAGCCTACAAGGAAGCCA---

administration of GP900 or fragments thereof to a host to elicit anti-
GP900 antibody production, and to a method of cryptosporidiosis treatment
or prophylaxis comprising administration of enti-GP900 antibodies to an
individual. Cryptosporidium parvum GP900 and GP900 antibodies to an
individual. Cryptosporidium parvum GP900 and GP900 antibodies. The
competitively inhibit sporozoite or merozoite attachment or invasion, and
are also useful for the generation of anti-GP900 antibodies. The
antibodies also inhibit the binding of GP900 ligands to GP900. GP900
contenins, fragments and antibodies may therefore be used to treat or
prevent cryptosporidiosis. Infection with Cryptosporidium is a common
cause of diarrhoea in humans and causes life-threatening diarrhoea in
immunocompromised persons. Cryptosporidiosis can be contracted from
contaminated municipal water supplies (e.g., public swimming pools). It
is also a cause of disease in animals, resulting in financial losses in
agriculture. GP900 fragments, fusion proteins and antibodies may also be
used for the diagnosis of Cryptosporidium parvum infections, and for the
contaminated parasite in the environment. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             319
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         485

The present invention relates to a method of detecting Cryptosporidium in biological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it with Cryptosporidium GP900, PG8 or cryptosporian antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for detecting and identifying individual Cryptosporidium isolates based on the genetic characteristics, and for diagnosis of prior or concurrent Cryptosporidium infection. The present sequence is a C. parvum protein sequence used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  379

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the GP900 glycoprotein of the protozoan Cryptosporidium parvum, DNA encoding it, GP900 fragments, and fusion proteins comprising GP900 fragments. The invention also relates to the administration of GP900 fragments thereof to a host to elicit anticopy production, and to a method of cryptosporidiosis treatment or prophylaxis comprising administration of anti-GP900 antibodies treatment or prophylaxis comprising administration of anti-GP900 antibodies to an individual. Cryptosporidium parvum GP900 and GP900 fragments are able to individual. Cryptosporidium parvum GP900 antibodies and are also useful for the generation of anti-GP900 antibodies. The antibodies also inhibit sporozoite or merozoite attachment/invasion and additionally inhibit the binding of GP900 ligands to GP900. GP900 additionally inhibit and antibodies may therefore be used to treat or proteins, fragments and antibodies may therefore be used to treat or prevent cryptosporidiosis. Infection with Cryptosporidium is a common cause of diarrhoea in humans and causes life-threatening diarrhoea in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New GP900 protein fragments and fusion proteins of Cryptosporidium parvum, useful for detecting the presence of the parasite, and diagnosing or treating Cryptosporidium infections by competitive inhibition of the function of GP900.
                                                                                                                                                                                                                                                                                             GP900; NINC isolate; glycoprotein; antibody; cryptosporidiosis; competitive inhibition; attachment; invasion; ligand binding; sporozoite; merozoite; diarrhoea; protozoacide; domain 2; mucin-like; variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunocompromised persons. Cryptosporidiosis can be contracted from contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of disease in animals, resulting in financial losses in agriculture. GP900 fragments, fusion proteins and antibodies may also be used for the diagnosis of Cryptosporidium parvum infections, and for the detection of the parasite in the environment. The present sequence represents a variant of the mucin-like domain 2 (AAB11734) of the Cryptosporidium parvum NINC isolate GP900 protein (AAB11727)

                                                                                                                                                                                                                                                                                                                                                                                                                 biological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it with Cryptosporidium GP900, F68 or cryptopain antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for detecting and identifying individual Cryptosporidium isolates based on the genetic characteristics, and for diagnosis of prior or concurrent Cryptosporidium infection. The present sequence is a C. parvum protein sequence used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                             TATACTAAATGCCAAAAAAGACGATCTACTTCGGTGCCGGCTGGTTCACTGACCGCCAAA 61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AGCTGAAGGACTTCAACTTCAACAAGCCGCGCTTCGACTTCTACGAAGGTGCCGTATACT

Sequence 8, Application US/08928361B
Patent NO. 6071518
GENERAL INFORMATION:
APPLICANT: Petersen, Carolyn
TITLE OF INVENTION: THEIR FUNCTIONAL MUTANTS, VARIANTS, ANALOGS AND FRAGMENTS
TITLE OF INVENTION: FOR TREATMENT AND DETECTION/DIAGNOSIS OF CRYPTOSPORIDIUM
TITLE OF INVENTION: SPECIES INFECTIONS
TITLE OF INVENTION: SPECIES INFECTIONS
NUMBER OF SEQUENCES: 30
CORRESPONDENCE ADDRESS:
ADDRESSEE: PETERS, VERNY, JONES & BIKSA
STREET: 385 Sherman Avenue, Suite 6
CITY: Palo Alto

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                        gtatactaaatgccaaaaaa..........acgaaggtgccgtatactaa 483

Sequence 344, Application US/09216393
Patent No. US20010014447A1
GENERAL INFORMATION:
APPLICANT: Milhausen, Michael James
TITLE OF INVENTION: TOXOPLASMA GONDII PROTEINS, NUCLEIC ACID MOLECULES, AND
TITLE OF INVENTION: USES THEREOF
FILE REPERENCE: TX-1-C2
CURRENT APPLICATION NUMBER: US/09/216,393
CURRENT FILING DATE: 1998-12-18
EARLIER PILING DATE: 1998-12-19
NUMBER OF SEQ ID NOS: 364
